

L^AT_EX Guidelines for Author Response

A. Introduction

After receiving paper reviews, authors may optionally submit a rebuttal to address the reviewers' comments, which will be limited to a **one page** PDF file. Please follow the steps and style guidelines outlined below for submitting your author response.

The author rebuttal is optional and, following similar guidelines to previous conferences, is meant to provide you with an opportunity to rebut factual errors or to supply additional information requested by the reviewers. It is NOT intended to add new contributions (theorems, algorithms, experiments) that were absent in the original submission and NOT specifically requested by the reviewers. You may optionally add a figure, graph, or proof to your rebuttal to better illustrate your answer to the reviewers' comments.

Per a passed 2018 PAMI-TC motion, reviewers should refrain from requesting significant additional experiments for the rebuttal or penalize for lack of additional experiments. Authors should refrain from including new experimental results in the rebuttal, especially when not specifically requested to do so by the reviewers. Authors may include figures with illustrations or comparison tables of results reported in the submission/supplemental material or in other papers.

Just like the original submission, the rebuttal must maintain anonymity and cannot include external links that reveal the author identity or circumvent the length restriction. The rebuttal must comply with this template (the use of sections is not required, though it is recommended to structure the rebuttal for ease of reading).

A.1. Response length

Author responses must be no longer than 1 page in length including any references and figures. Overlength responses will simply not be reviewed. This includes responses where the margins and formatting are deemed to have been significantly altered from those laid down by this style guide. Note that this L^AT_EX guide already sets figure captions and references in a smaller font.

B. Formatting your Response

Make sure to update the paper title and paper ID in the appropriate place in the tex file.

All text must be in a two-column format. The total allowable size of the text area is $6\frac{7}{8}$ inches (17.46 cm) wide by $8\frac{7}{8}$ inches (22.54 cm) high. Columns are to be $3\frac{1}{4}$ inches (8.25 cm) wide, with a $\frac{5}{16}$ inch (0.8 cm) space between them. The top margin should begin 1 inch (2.54 cm) from the top

001
002
003

004 Figure 1. Example of caption. It is set in Roman so that mathematics (always set in Roman: $B \sin A = A \sin B$) may be included 005 without an ugly clash.
006
007

008 edge of the page. The bottom margin should be $1\frac{1}{8}$ inches 009 (2.86 cm) from the bottom edge of the page for 8.5×11 - 010 inch paper; for A4 paper, approximately $1\frac{5}{8}$ inches (4.13 0cm) from the bottom edge of the page.
011
012 Please number any displayed equations. It is important 013 for readers to be able to refer to any particular equation.
014 Wherever Times is specified, Times Roman may also 015 be used. Main text should be in 10-point Times, single- 016 spaced. Section headings should be in 10 or 12 point Times.
017 All paragraphs should be indented 1 pica (approx. $\frac{1}{6}$ inch 018 or 0.422 cm). Figure and table captions should be 9-point 019 Roman type as in fig:onecol.
020 List and number all bibliographical references in 9- 021 point Times, single-spaced, at the end of your response.
022 When referenced in the text, enclose the citation number 023 in square brackets, for example [?]. Where appropriate,
024 include the name(s) of editors of referenced books.
025 To avoid ambiguities, it is best if the numbering for 026 equations, figures, tables, and references in the author re- 027 sponse does not overlap with that in the main paper (the 028 reviewer may wonder if you talk about fig:onecol in the au- 029 thor response or in the paper). See L^AT_EX template for a
030 workaround.
031

B.1. Illustrations, graphs, and photographs

032 All graphics should be centered. Please ensure that any point 033 you wish to make is resolvable in a printed copy of the re- 034 sponse. Resize fonts in figures to match the font in the body 035 text, and choose line widths which render effectively in print.
036 Readers (and reviewers), even of an electronic copy, may 037 choose to print your response in order to read it. You cannot 038 insist that they do otherwise, and therefore must not assume 039 that they can zoom in to see tiny details on a graphic.
040 When placing figures in L^AT_EX, it is almost always best 041 to use \includegraphics, and to specify the figure 042 width as a multiple of the line width as in the example below
043

044 \usepackage{graphicx} ...
045 \includegraphics[width=0.8\linewidth]
